

Mailjet SMTP Integration with n8n Workflow

Overview

This guide outlines the full procedure for connecting Mailjet's SMTP service with n8n to send scheduled daily quote emails. It includes Mailjet setup, SMTP credential creation, node configuration in n8n, and scheduling logic.

1. Mailjet Configuration

Step 1. Create and Log in to Mailjet Account

Visit <https://www.mailjet.com/> and create an account.

Step 2. Add and Verify a Sender Email

- Go to **Senders and Domains** → **Add Sender Address**
- Enter your email (e.g., `linusmugendi680@gmail.com`) and verify via email link

Step 3. Generate SMTP Credentials

- Navigate to **SMTP and SEND API Settings**
- Copy:
 - SMTP Host: `in-v3.mailjet.com`
 - Port: `587`
 - API Key (Username)
 - Secret Key (Password)

2. n8n Workflow Configuration

Node 1. Cron Node: Schedule Email Daily

- Type: Cron
- Settings: Every day at 08:15 AM

Node 2. Set Node: Define Quote

- Field: `quote`
- Value: e.g., "The only limit is your imagination."

Node 3. Send Email Node: SMTP with Mailjet

- Type: Send Email
- Operation: Send
- Credentials:
 - SMTP Host: `in-v3.mailjet.com`
 - Port: `587`
 - Secure: `true`
 - User: Mailjet API Key
 - Password: Mailjet Secret Key
- From: `linusmugendi680@gmail.com`
- To: Your email (same or different)
- Subject: Your Daily Quote
- Message: Set using an expression:

`{{ $json.quote }}`
- Email Type: HTML

3. Execution and Schedule

After configuring the workflow:

- Hit **Execute Node** to test immediately.
- Workflow will run automatically every day at 08:15 AM.

Conclusion

You've set up a complete automated email system using Mailjet SMTP and n8n. Your daily quote is now on autopilot!
